The Environmental Management and Sustainability major explores the complex interactions between humans and their environment. The major not only integrates the environmental sciences and their human dimensions, but also translates that science into practical and effective management actions, to improve local, regional and global sustainability. This major emphasises multi-disciplinary problem solving and practical experience to tackle current and future environmental management and sustainability challenges.

Murdoch's Bachelor of Science is a flexible degree which gives you the opportunity to build deep understanding and practical experience as well as to supplement your studies by engaging with industry and the community on relevant problems. You can even undertake studies through another discipline to broaden your understanding of the way in which science operates in relation to social, business, health and policy environments.

Employment Prospects:

Environmental Management and Sustainability graduates have a wide range of employment opportunities in the public and private sectors from mining rehabilitation to consulting, urban planning, eco-tourism, parks and wildlife management, sustainable development, land and water management, waste and environmental services, science education and communication. Employment opportunities are likely to be enhanced for graduates who continue into either Research Honours or the Graduate Certificate in Environmental Assessment and Management or Graduate Certificate or Diploma in Environmental Science.

Admission Requirements (Onshore):

As per normal undergraduate admission requirements. There are no prerequisites for admission but it is highly desirable for students to have undertaken WACE Chemistry 3A/3C and Mathematics 2C/2D.

Special Requirements:

This course can be completed internally or externally. External students will be required to attend classes on-campus for some units.

Recommended Double Majors:

Conservation and Wildlife Biology; Environmental Science; Marine Science

Recommended Minors:

Ecosystem Management; Marine Biology; Sustainability, Ecosystems and Community Development; Sustainable Development; Waste and Water Management

Excluded Minors:

Environmental Issues; Resource Management

Main Research Areas:

Ecosystem management and restoration, technologies and policies for sustainable development.
