ANIMAL SCIENCE

ANIMAL SCIENCE (BSC)

Agricultural Sciences

Bachelor of Science (BSc) in Animal Science

Course Codes: B1317 B1317A

Duration: 3 years full-time or part-time equivalent

Availability:

- Murdoch campus (internal) Students commencing mid-year will require 3.5 years to complete.

The aim of this degree is to train an adaptable animal scientist who will find employment in a wide range of agricultural industries. The degree will be excellent preparation for a career in animal agriculture and the animal research industries.

In the first year, students will be introduced to the major animal production industries and also study chemistry, introductory physiology and anatomy, statistics and cell biology,

During second and third year, students will undertake further study in animal production systems (including scientific writing and communication), biochemistry, physiology and anatomy, statistics, pathology, nutrition, toxicology and genetics.

Murdoch's Bachelor of Science is a flexible degree which gives you the opportunity to build deep understanding and practical experience as well as to supplement your studies by engaging with industry and the community on relevant problems. You can even undertake studies through another discipline to broaden your understanding of the way in which science operates in relation to social, business, health and policy environments.

Employment Prospects:

Gradlink surveys over the past five years indicate at least 75 per cent full-time employment. About 20 per cent of graduates go on to further full-time study. Agricultural industries employ animal science graduates in a variety of roles such as consultants, technical advisors, and government research officers.

Admission Requirements (Onshore):

As per normal undergraduate admission requirements. There are no prerequisites for admission but it is highly desirable for students to have studied WACE Chemistry 3A/3B and at least Mathematics 2A/2B.

Special Requirements:

Internet access; on-campus attendance for laboratory sessions.

Recommended Double Majors:

Animal Health; Crop and Pasture Science

Main Research Areas:

Animal Production, Agricultural and Veterinary Biotechnology.

Mid-year entry clarification:

Students enrolling mid-year should note that it is not possible to complete the major in three years, so 3.5 years will be required. International students in particular should take this into account when planning enrolments, visas, and fees.

Major Prerequisites

Chemistry Background

Students who achieved a final scaled score of 50 percent or more in Chemistry 3A/3B or Chemistry ATAR within the past three years should seek an exemption from their Academic Chair for CHE140 Fundamentals of Chemistry. Students who have completed previous chemistry not stated above should also consult their Academic Chair for clarification of their enrolment requirements.
