## CHEMISTRY

### CHEMISTRY (BSC)

Bachelor of Science (BSc) in Chemistry

**Main Research Areas:**

Solution chemistry, energy storage, hydrometallurgical chemistry, chemical analysis, advanced materials, bioprocessing, natural products chemistry and organic chemistry.

**Recommended Double Majors:**

Environmental Science; Forensic Biology and Toxicology; Genetics and Molecular Biology; Mathematics and Statistics; Mineral Science; Physics and Nanotechnology

**Employment Prospects:**

The employment situation for graduates with a Chemistry degree is bright, especially for those who combine chemistry with other disciplines. Opportunities for chemists are not limited to Australia, and the skills and knowledge acquired in a chemistry degree are valued around the world. The skills learned whilst studying chemistry can take graduates on to a satisfying career in numerous fields both in and out of the lab anywhere in the world. Chemists are found in roles within law and accounting firms, NGOs, government policy positions at the local and international level, and the art world. Creativity, passion, logical thinking, problem solving, and the ability to analyse complex situations are all skills at the top of any employer's list of desirable attributes. Chemists have these abilities in abundance. That's why chemists can be found at the forefront of research, teaching, the arts, and business.

Murdoch's Bachelor of Science is a flexible degree which gives you the opportunity to build deep understanding and practical experience as well as to supplement your studies by engaging with industry and the community on relevant problems. You can even undertake studies through another discipline to broaden your understanding of the way in which science operates in relation to social, business, health and policy environments.

**Recommended Minors:**

Applied Statistics; Biomedical Science; Ecosystem Management; Environmental Issues; Forensic Biology; Marine Biology; Molecular Biology; Neuroscience; Resource Management; Security, Terrorism and Counterterrorism

A knowledge of chemical concepts is applicable to all areas of science and has many industrial and engineering applications. Chemists play leading roles in fighting disease (in humans, animals and agriculture), criminal investigations, discovery and utilisation of natural resources, developing sustainable industrial processes, and creating novel nano-materials.

The Chemistry major has been designed to provide students with a thorough understanding of chemistry whilst retaining the flexibility to study complementary areas of interest.

**Availability:**

- Murdoch campus (internal) <br> Murdoch campus (external)

**Excluded Minors:**

Organic and Biological Chemistry

**Special Requirements:**

Students enrolling in units that have a practical component must make allowance for on-campus attendance to complete the practical work. The on-campus sessions for external students are generally held in a one-week block for each unit; the dates are published in each unit guide.
