MINERAL SCIENCE

MINERAL SCIENCE (BSC)

School of Engineering and Information Technology

Bachelor of Science (BSc) in Mineral Science

Course Codes: B1317 B1317A

Duration: 3 years full-time or part-time equivalent

Availability:

- Murdoch campus (internal)
 Murdoch campus (external)

Mineral extraction processes bridge applied science and engineering disciplines. Mineral scientists focus on the fundamental science of these processes. A Mineral Science degree offers the opportunity to train in interdisciplinary sciences by taking units in cognate disciplines.

This degree also caters for students with interests in mineral science, who wish to meet the requirements of double major degrees with Chemistry, Environmental Science or other disciplines such as Law and Management, or to continue towards a Bachelor of Engineering Honours in Chemical and Metallurgical Engineering degree. In addition, the three-year Bachelor of Science in Mineral Science degree is suitable for students wishing to develop the ability for creative, independent research by completing an additional one year research project to gain an Honours in Mineral Science degree, which is required for admission to the higher research degrees (i.e. Masters or PhD).

Murdoch's Bachelor of Science is a flexible degree which gives you the opportunity to build deep understanding and practical experience as well as to supplement your studies by engaging with industry and the community on relevant problems. You can even undertake studies through another discipline to broaden your understanding of the way in which science operates in relation to social, business, health and policy environments.

Employment Prospects:

Graduates can expect to find employment in mineral processing and metal extraction plants throughout Australia and overseas as plant and project metallurgists, mill superintendents, operations managers, consultants and researchers.

Admission Requirements (Onshore):

As per normal undergraduate admission requirements.

It is recommended that students entering this major have completed WACE Chemistry 3A/3B or Chemistry; ATAR, Physics 3A/3B and Mathematics: Specialist 3C/3D.

Applicants having other backgrounds will be considered for admission, but may need make-up units in first year, and therefore may need more than one year to complete Part I.

Special Requirements:

This course can be completed internally or externally. Students enrolling in units that have a practical component must make allowance for on-campus attendance to complete the practical work. The on-campus sessions for external students are generally held in a one week block for each unit; the dates are published in each unit guide.

Recommended Double Majors:

Chemistry; Environmental Science; Mathematics and Statistics

Main Research Areas:

Chemistry; science; physics; mathematics; mineral; minerals; metal; metals; process; metallurgy; industrial; industrial process; extractive metallurgy; mining; geology; hydrometallurgy; pyrometallurgy.
